### Admission Essay

I have yearned to be scientist ever since I was a little child. My interest in science stems from my love for engineering, experimentation, and contributing to scientific findings. The Mythbusters and Bill Nye piqued my interest as a child. Later, I searched it out at every museum I could locate. All sorts of science elicited my interest, but innovative scientific endeavors had a special place in my heart. Such tasks were a great pleasure to me; they grew in importance as time went on. In addition, the engagements resulted in my interest in hands-on science, sparking my desire to join the School of Electrical and Computer Engineering at ABCDE University. Working in their lab and partaking in the Student Science Training Course will make me feel like a child in a candy store. An opportunity to work with scientists and engineers at this level will profoundly impact my professional aspirations and personal identity. There is no better place for me to pursue a career in science and engineering than ABCDE University.

ABCDE University has a lot more to offer than engineering to me. I aspire to collaborate with the wide range of individuals the university welcomes and who share my outlook on life. They, like me, are at ABCDE University because they believe in the importance of embracing a diverse student body. For ABCDE University to attain the trust, integrity, and excellence that the institution holds dear, diverse people and talents are needed to establish a friendly atmosphere for those ideals. Attributable to my educational and professional background, I believe I can contribute to the university's quest for knowledge

while laying the groundwork for my future success. As a student at the ABCDE University, I will be looking forward to becoming the most successful engineer.

The ABCDE University's focus on diversity is also evident in the number of specialized departments it has. Additionally, ABCDE University has become an expert at tailoring each student's educational experience to their specific needs. However, students are not isolated because of having to work with other scholars who share their special field of interest. For each discipline, from engineering to computer science, the ability to construct a real educational environment that closely resembles the actual world is enabled by the close collaboration between its centers. This means that ABCDE University is more than just the best fit for me; it is the only perfect choice. I firmly believe that I will make a positive contribution to ABCDE University's scholarly environment. This is because of my intellectual acuity and ability to grasp all the information offered in the scientific and engineering curriculum.

ABCDE University's School of Electrical and Computer Engineering will allow me to realize my career goals. This will ensure that I pursue my ambition of engineering brilliance at a faculty where learning and research are intertwined. ABCDE University is the greatest place for me to pursue my passion for electrical engineering and computer science because of my hobbies and participation in tasks related to the two fields. My knowledge of these ever-changing fields is merely a fraction of what is possible in the fields. In the same way, I believe that my stay at the ABCDE University will allow me to realize my full potential. Collaborating with scientists from different backgrounds will widen my worldview. This is important for my future practice in any part of the world.
