My Journey Into Space

I have dreamt of journeying to space from the time I was a kid. Every night, I used to admire the sky with its glittering stars since they were awesomely glowing. At that age, I had no idea that one could take a trip and observe these great wonders closely. As a result, I was overwhelmed with joy when I found myself on a journey to outer space. The trip was one of the most memorable moments in my life. It marked a rare chance to witness a dream come true in my life.

My journey to outer space was a lifetime achievement, an opportunity to tick a grand goal off the bucket list. Once I entered the spaceship, I was dumbfounded, but I slowly adapted to my new situation. Inside the space vehicles, we were around seven individuals, and I felt safe since I was with astronauts who have made such a journey in the past. Despite being in an unfamiliar place, I immediately loved the surrounding. Some of the crew members were busy going through navigation and mapping equipment, I had no idea what they were doing, and I did not bother as I was busy touring the spacecraft. Within a short period, I started to witness changes on the outside, and there were different stars, meteors, and asteroids.

Nothing prepared me for the astonishing view that befell my eyes. As I was floating weightlessly from space, the earth seemed alive, and wondrous ancient and tectonic textures defined the landmasses. The feeling of being weightless was terrific, and I was behaving like a

baby trying to walk for the first time. While undergoing this experience, I wondered how the first astronauts felt when they went to space. It was a surreal experience.

The most surprising moment was my take-off from the space coast. While listening to the countdown just before take-off, I found myself halfway around the world in a flash. As I would later learn, the spacecraft moves so fast that it is difficult to notice when you are inside. The first signs I noticed were the floating items. Once in space, one can easily differentiate between armatures and veterans. The experienced crew members could easily tell me the continents we were flying over at a glance. It is important to use both the hands and toes to gain stability midair. Once I learned all of these, I came to appreciate the beauty of space and moved around comfortably.

I have always heard stories about the beauty of planet Saturn. During my space journey, I was able to witness and marvel at the beauty. It had numerous colorful rings around it, and I was amazed at the mystery of the world. How did these breathtaking creations come to be? While we were in orbit, I wondered if other living creatures were out there experiencing the epic magic apart from us. Many arguments and conspiracy theories about creatures exist, and they were lingering through my mind.

In space, I lost consciousness of time, unlike when on earth. I found myself on the journey back to earth in what did not seem like an eternity. Everything happened so fast! During the trip back home, I could not stop thinking about the fantastic and beautiful nights, the shining stars, the brighter moon, and the great heavens. I could also see the beauty of our motherland, the earth. As I stepped out of the spacecraft, I was relieved to be back at home and was yearning to tell people about my incredible journey.
